Growing Certified Organic

What you should know about VITA

What are VITA organic fertilizers?

VITA natural organic fertilizers are derived from natural sources i.e. plant, animal, mineral deposits and rocks. When organic matter is broken down by organisms which live in the soil such as fungi, bacteria, algae, moulds, insects and earthworms, nutrients are released and made available to the plant. Naturally healthy soil containing a lot of organic matter allows soil to hold nutrients and water essential for good plant growth.

Why you should use VITA organic fertilizers?

Most commercial and home gardeners practise intensive growing methods to get tasty nutritious produce, bountiful crops and /or beautiful flowers. In order to achieve this continuously the nutrients in the soil which are necessary for healthy vigorous growth, have to be replenished by the addition of fertilizers.

VITA Organic Fertilizers are most suitable for the following reasons:

- 1** VITA Fertilizers are made from original natural fertilizers, scientifically formulated and blended to make a range of complete fertilizers supplying major, minor and micro nutrients essential for optimum plant growth.
- 2** VITA Fertilizers replenish nutrients in the soil so plants can take up the nutrients as they are required.
- 3** VITA Fertilizers stimulate soil life and activate beneficial micro-organisms, bacteria and soil insects (e.g. earthworms) which promote a healthy soil, therefore well nourished plants.
- 4** VITA Fertilizers are labour and cost effective as fertilizer is applied every 4-5 months on healthy soils.
- 5** VITA Fertilizers contain organic nutrients which are released slowly so will not burn leaves or plant roots when applied as directed.
- 6** VITA Fertilizers are ideal for use in sandy soils as they become part of the soil structure and the nutrients are released slowly for absorption by plants.
- 7** VITA Fertilizers are easy to use:
 - Sprinkle over surface of soil and work in lightly, or
 - Broadcast over established plantings, or
 - Mix with compost and topsoil when planting, or
 - Add to compost heap to promote composting process while enriching nutrient content of compost.
- 8** VITA Fertilizers are natural so nutrients are not highly concentrated and pH is maintained in soil.
- 9** VITA Fertilizers create jobs and employment for thousands of the poorest in urban and rural areas by recycling e.g. bone, while cleaning the environment of waste.
- 10** VITA Fertilizers are Approved Inputs for Certified Organic Growing by Control Union (CU 833864).

Talborne Organics (Pty) Ltd Reg No 1989/003866/07
